

BLS6

PROPORTIONAL STACKABLE VALVE ASSEMBLY WITH LOAD SENSING

SERIES 12

p max 315 bar
Q max 120 l/min

OPERATING PRINCIPLE

- The BLS6 is a stackable valve assembly. It can be assembled with up to 8 working sections (proportional and solenoid directional valves together)
- Each module is equipped with a meter-in compensator that keep constant the flow, independently from load changes.
- Sections with pressure compensator are not influenced in any way by other operated functions, provided that sufficient pump capacity is available. In order to work correctly, the sum of the flows contemporarily used must not overcome the 90% of the inlet flow.
- Working ports A and B are threaded 1/2" BSP. Ports P1, P2 and T1 of the inlet module are threaded 3/4" BSP.
- The lever override is available as option.

1.2 - On-off modules

Proportional and on-off modules can be used together. In this case, the description for the spool type in the identification code has to be as follow:

SC = closed center with on-off solenoid

SA = open center with on-off solenoid

Two spools for high flow rates are available: SC60/60 and SA60/60.

1.3 - Inlet plates

The inlet section is available in different versions, for fixed and for variable pumps with load sensing. The version for fixed pump can be easily converted to work with variable pumps and vice versa.

1.4 - End plates

2 - HYDRAULIC FLUIDS

Use mineral oil-based hydraulic fluids HL or HM type, according to ISO 6743-4 or fluids HFDR type. For the use of other kinds of fluid such as HFA, HFB, HFC, please consult our technical department. Using fluids at temperatures higher than 80 °C causes a faster degradation of the fluid and of the seals characteristics.

The fluid must be preserved in its physical and chemical characteristics.

3 - CHARACTERISTIC CURVES

(values obtained with viscosity 36 cSt at 50 °C)

Typical constant flow rate obtained through the embedded compensator, and current with 12V solenoid type (for D24 version the maximum current is 860 mA), measured for the various spool types available.

4 - ELECTRICAL CHARACTERISTICS

Proportional solenoid

The proportional solenoid comprises two parts: tube and coil.

The tube, screwed to the valve body, contains the armature which is designed to maintain friction to a minimum thereby reducing hysteresis.

The coil is mounted on the tube secured by means of a lock nut.

It can be rotated through 360° depending on installation clearances.

ELECTROMAGNETIC COMPATIBILITY (EMC)	According to 2014/30/EU		
CLASS OF PROTECTION Coil insulation (VDE 0580) Impregnation:	class H class F		

Protection from atmospheric agents IEC EN 60529

K7 DEUTSCH DT04 male	x	x (*)

(*) The protection degree is guaranteed only with the connector correctly connected and installed

5 - STEP RESPONSE

(measured with mineral oil with viscosity of 36 cSt at 50°C with electronic control card)

Step response is the time (delay) taken for the valve to reach 90% of the set position value following a step change of the reference signal.

Reference signal step	0 → 100%	100 → 0%
STEP RESPONSE [ms]		
BLS6	50	40

6 - ELECTRICAL CONNECTIONS

7 - ELECTRICAL CONNECTORS

The on-off modules are supplied without connectors. For on-off coils with standard electrical connection K1 type EN 175301-803 (ex DIN 43650) connectors can be ordered separately: see catalogue 49 000.

11 - MANUAL OVERRIDES

The standard valve has solenoids whose pin for the manual operation is integrated in the tube. The operation of this control must be executed with a suitable tool, minding not to damage the sliding surface.

The following manual overrides are available:

- **CM** manual override, boot protected.
- **CK** knob for proportional valves: When the set screw is screwed and its point is aligned with the edge of the knob, tighten the knob till it touches the spool: in this position the override is not engaged and the valve is de-energized. After adjusting the override, tighten the set screw in order to avoid the knob loosening.
- **CK1** knob for solenoid valves: the device is actuated by screwing it.
- **CH** lever manual override.

NOTE: The overall dimension shown in the drawings is for the proportional modules; In ON-OFF modules consider an increase of 5 mm compared to the reported dimensions.
