

BFD***SIX-PORTS FLOW DIVERTER****SERIES 10****p max 320 bar****Q max 90 l/min****OPERATING PRINCIPLE**

- The BFD* modular solenoid valve is a six-port flow diverter that allows the simultaneous connection of two of the four working lines, switching between them by solenoid actuation.
- They are available in two sizes, depending on the flowrate, and they are used mainly for compact applications in mobile sector.
- Up to 5 diverters can be fastened together in stacked assemblies, working in series.
- The external drain is available as option on both sizes.
- The standard valve BFD06 is suitable to ensure a salt spray resistance up to 240 hours. To reach 600 hours of resistance WK* type coils with zinc-nickel treatment are needed.
- The standard valve BFD10 is suitable to ensure a salt spray resistance up to 600 hours.

2 - SPOOL TYPE

2 - HYDRAULIC FLUIDS

Use mineral oil-based hydraulic fluids HL or HM type, according to ISO 6743-4. For these fluids, use NBR seals (code N). For fluids HFDR type (phosphate esters) use FPM seals (code V). For the use of other fluid types such as HFA, HFB, HFC, please consult our technical department. Using fluids at temperatures higher than 80 °C causes a faster degradation of the fluid and of the seals characteristics. The fluid must be preserved in its physical and chemical characteristics.

3 - CHARACTERISTIC CURVES

(obtained with viscosity 36 cSt at 50 °C)

Pressure drops Δp -Q at initial position

4 - OPERATING LIMITS

The curves define the flow rate operating fields according to the valve pressure of the different versions.

The values have been obtained according to ISO 6403 norm with solenoids at rated temperature and supplied with voltage equal to 90% of the nominal voltage. The values have been obtained with mineral oil, viscosity 36 cSt, temperature 50 °C and filtration according to ISO 4406:1999 class 18/16/13.

BFD10	50 ÷ 100	20 ÷ 40

6 - ELECTRICAL CHARACTERISTICS

6.1 - Solenoids

These are essentially made up of two parts: tube and coil. The tube is threaded into the valve body and includes the armature that moves immersed in oil, without wear. The inner part, in contact with the oil in the return line, ensures heat dissipation.

Protection from atmospheric agents IEC 60529

The IP protection degree is guaranteed only with both valve and connectors of an equivalent IP grade, correctly connected and installed.

WK1	IP66	IP66
K7	IP65/67	IP65
WK7, WK7D	IP66/IP68/IP69, IP69K*	

(*) The IP69K protection degree is not taken into account in IEC 60529 but it is included in ISO 20653.

SUPPLY VOLTAGE FLUCTUATION	$\pm 10\%$ Vnom
MAX SWITCH ON FREQUENCY	10.000 ins/hr
DUTY CYCLE	100%
ELECTROMAGNETIC COMPATIBILITY (EMC) (NOTE)	In compliance with 2014/30/EU
LOW VOLTAGE	In compliance with 2014/35/EU
CLASS OF PROTECTION Coil insulation (VDE 0580) Impregnation	class H class F (BFD06) class H (BFD10)

NOTE: In order to further reduce the emissions, use of type H connectors is recommended. These prevent voltage peaks on opening of the coil supply electrical circuit (see cat. 49 000).

6.2 - Current and absorbed power

WK1, WK7 and WK7D coils have a zinc-nickel surface treatment and are specific for the high resistant version to salt spray.

The WK7D coil includes a suppressor diode of pulses for protection from voltage peaks during switching. During the switching the diode significantly reduces the energy released by the winding, by limiting the voltage to 31.4V in the D12 coil and to 58.9 V in the D24 coil.

10 - INSTALLATION

The solenoid valve can be installed in any position without affecting its operation.

11 - ELECTRICAL CONNECTIONS

K1 and WK1 connections (for EN 175301- 803 connector) are described in the dimension drawings. K7, WK7 and WK7D connections are available for BFD06* valves only.

12 - ELECTRICAL CONNECTORS

The solenoid valves are supplied without connectors. For coils with standard electrical connection K1 type EN 175301- 803 (ex DIN 43650) the connectors can be ordered separately: see catalogue 49 000.

13 - OPTIONS

13.1 - Subplate external drain port (option Y)

This version allows the operation with pressures up to 320 bar on the ports.

It consists in a Y drain hole realized on the valve interface, where the Y port is connected with the solenoid tubes: in this way the tubes are not stressed by the pressure operating on the valve ports.

13.2 - External drain through plug (Y1)

This version is used for interchange function in the control circuits of the pilot lines: it drains the inactive lines through the 1/4 "BSP side drain plug (Y1 connection)

This ensures that loads on idle lines are not subjected to unwanted movement.

Connect Y1 port to an appropriate drain line.

14 - MANUAL OVERRIDES

These valves have solenoids whose pin for manual operation is integrated in the tube. Actuate this override by pushing it with a suitable tool, minding not to damage the sliding surface.

14.1 - CM manual override boot protected.

14.2 - CK1 turning knob override.

Available for BFD06 only

15 - SERIES CONFIGURATION

The BFD* valves can also be assembled in series, bundled up to 5 modules. The fixing kit must be ordered separately. It includes: rods and screws, nuts, security washers and OR, as indicated in the table below.
